AMENDMENTS TO THE CLAIMS

Please replace all prior versions and listings of the claims with the following amended listing of claims:

1. (currently amended): An automated kiosk comprising:
 - (a) a cabinet;
 - (b) a face frame releasably securable to said cabinet;
 - (c) a plurality of cross members ~~secured to said face frame, at least one of said cross members secured to said face frame, at least one of said cross members releasably securable in a plurality of configurations in relation to said face frame; and~~
 - (d) a plurality of hardware components releasably secured to said cross members.
2. (currently amended): [A] The kiosk as claimed in claim 1, wherein said hardware components are sized and configured such that they project substantially directly inward into said cabinet when said face frame is secured to said cabinet.
3. (currently amended): [A] The kiosk as claimed in claim 1, wherein one edge of said face frame is hinged to a corresponding edge of said cabinet.
4. (currently amended): [A] The kiosk as claimed in claim 1, wherein ~~said at least another of said cross members [are] is releasably securedable to said face frame~~ another cross member in said plurality of cross members.
5. (currently amended): [A] The kiosk as claimed in claim 1, wherein ~~said at least one releasably securable of said cross member[s] releasably securable in a plurality of configurations in relation to said face frame is releasably securable at each end thereof~~ to either said face frame or another cross member in said plurality of cross members.

- 4 -

6. (currently amended): [A] The kiosk as claimed in claim 1, further comprising a faceplate secured to at least one of said cross members, wherein at least one of said plurality of hardware components is secured to said faceplate such that said ~~wherein at least one of said plurality of cross members is secured to~~ at least one of said plurality of hardware components is secured to said cross members indirectly, such that said at least one of said plurality of cross members is secured to a faceplate and said faceplate is secured to said at least one of said plurality of hardware components.

7. (currently amended): [A] The kiosk as claimed in claim 1, wherein one of said plurality of hardware components is a keyboard, and said keyboard is secured to said face frame indirectly by a keyboard housing, and said keyboard housing is secured to said face frame.

8. (currently amended): [A] The kiosk as claimed in claim 1, further comprising a main frame secured to said face frame, at least another of said cross members secured to said main frame such that said at least another of said plurality of cross members is secured to said face frame indirectly, such that said at least some of said plurality of cross members is secured to a housing and said housing is secured to said face frame.

9. (withdrawn) A kiosk as claimed in claim 8, further comprising a plurality of housings secured to said face frame.

10. (withdrawn) A kiosk as claimed in claim 1, further comprising a faceplate on an upper portion of said face frame, said faceplate configured such that a top of said faceplate projects farther out from said face frame than a bottom of said faceplate.

11. (currently amended): An automated kiosk comprising:
a cabinet[.];
a [front] face frame[.]; and

- 5 -

a plurality of hardware components secured to said face frame.

12. (currently amended): [A] The kiosk as claimed in claim 11, further comprising a door in said kiosk, said door configured to allow access to said hardware components.

13. (currently amended): [A] The kiosk as claimed in claim 12 wherein said face frame is said door.

14. (currently amended): [A] The kiosk as claimed in claim 11, further comprising a plurality of cross members secured to said face frame, wherein at least one of said plurality of hardware components is secured to said cross members such that wherein at least one of said plurality of hardware components [are] is secured to said face frame indirectly, such that said hardware components are secured to a plurality of cross members and said plurality of cross members is secured to said face frame.

15. (currently amended): [A] The kiosk as claimed in claim 11, wherein said hardware components are sized and configured such that they project substantially directly inward into said cabinet when said face frame is secured to said cabinet.

16. (currently amended): [A] The kiosk as claimed in claim 14, wherein at least one of said cross members is releasably securable in a plurality of configurations in relation to said face frame.

17. (currently amended): [A] The kiosk as claimed in claim 14, further comprising a faceplate secured to wherein at least one of said plurality of cross members, wherein said at least one of said plurality of hardware components is secured to said faceplate such that said is secured to at least one of said plurality of hardware components is secured to said cross members indirectly, such that at least one of said plurality of cross members secured to a faceplate and said faceplate is secured to said at least

- 6 -

~~one of said plurality of hardware components.~~

18. (currently amended): [A] The kiosk as claimed in claim 14, further comprising a main frame secured to said face frame, at least one of said cross members secured to said main frame such that ~~wherein at least one of said plurality of cross members is secured to said face frame indirectly, wherein said plurality of cross members is secured to a housing and said housing is secured to said face frame.~~

19. (currently amended): A method of modifying a kiosk ~~of claim 1~~, comprising the steps of:

- (a) removing a hardware component or a faceplate from said kiosk;
- (b) repositioning a releasably securable cross member on said kiosk; and
- (c) installing a new hardware component on said kiosk.

20. (currently amended): A method of constructing a kiosk ~~of claim 1~~, comprising the steps of:

- (a) assembling a cabinet to a face frame;
- (b) receiving an order which designates the hardware components required for the kiosk;
- (c) securing a plurality of cross members to said face frame in a configuration suitable for receiving said designated hardware components; and
- (d) securing said designated hardware components to said cross members.

21. (new): The kiosk as claimed in claim 1, wherein said cross members define a plurality of longitudinally spaced apart holes for receiving a fastener for securing said cross members.

22. (new): The kiosk as claimed in claim 21, wherein said holes are spaced apart at intervals of predetermined length.

- 7 -

23. (new): The kiosk as claimed in claim 1, further comprising a plurality of faceplates releasably secured to said face frame, at least one of said plurality of hardware components releasably secured to at least one of said plurality of faceplates.

24. (new): The kiosk as claimed in claim 6, further comprising a plurality of faceplates releasably secured to at least one of said cross members, at least one of said plurality of hardware components releasably secured to at least one of said plurality of faceplates.

25. (new): The kiosk as claimed in claim 1, wherein said face frame has a front face defining a plurality of recesses, said kiosk further comprising a plurality of faceplates having a front surface, received with said recesses and releasably secured to said face frame such that the front surface of said faceplates is substantially parallel to said front face of said face frame, at least one of said plurality of hardware components releasably secured to at least one of said plurality of faceplates.

26. (new): The kiosk as claimed in claim 23, further comprising a plurality of gaskets for providing a seal, said gaskets interposed between said faceplates and said face frame

27. (new): The kiosk as claimed in claim 24, further comprising a plurality of gaskets for providing a seal, said gaskets interposed between said faceplates and said at least one of said cross members to which said faceplates are releasably secured.

28. (new): The kiosk as claimed in claim 1, wherein at least one of said cross members is releasably secured along a lateral axis of said face frame, and at least one of said cross members is releasably secured along a longitudinal axis of said face frame, said laterally and longitudinally secured cross members forming a configurable grid for releasably securing said plurality of hardware components.

- 8 -

29. (new): The kiosk as claimed in claim 26, wherein said gasket is L shaped.

30. (new): The kiosk as claimed in claim 26, wherein said gasket is T shaped.

31. (new): The kiosk as claimed in claim 27, wherein said gasket is L shaped.
